

Government of India Geological Survey of India

Indian Coal and Lignite Resources - 2025

**NATURAL ENERGY RESOURCES
MISSION-IIB
2025**

PREFACE

The systematic exploration of coal in India started about 179 years back sometimes in the year 1845. Since 1940, various Committees had been appointed by the Govt. to study the problems relating to the production, treatment and utilization of coal and many of the recommendations made by those Committees had been accepted by the Govt. in principle and were also acted upon to the extent found practicable. Having regard to the importance of coal in the rapidly developing industrial economy of the country, after Independence, particularly with reference to the implementation of the successive Five Year Plans, the Govt. of India considered it essential that the entire issue of coal, including the assessment of coal resources, demand, production, transport, treatment and scientific processing, use of bye-products, conservation etc. should be under the constant review of a central body.

*The erstwhile Ministry of Production by a resolution No. 25-CI (12)/56 dated the 28th August 1956, accordingly set up "**Coal Council of India**" (CCI) mainly to have reviews and studies conducted under its overall supervision, conservation of the coal resources etc. of the country. CCI had set up a Committee on Assessment of Resources (CAR) in 1956 and the committee drew up the "**Indian standard Procedure for Coal Reserve Estimation**" (ISP) in 1957. **Geological Survey of India**, as a member of this committee was mainly responsible for collation of surface and subsurface data and estimation of seam wise reserve.*

*The Working Group on Energy Policy constituted by the Planning Commission eventually set up a **Task Force on Coal in 1972** to estimate coal resource of the country following the ISP. In 1972, all the available assessments were compiled by GSI and a total resource database of the country was made. The estimate was incorporated in the Report of the **Fuel Policy Committee (1974)**.*

In 2012, Ministry of Coal decided to switch over from existing UHV based classification to the Gross Calorific Value (GCV) based classification system for grading of non-coking Indian coals. A Task Force was constituted in the 7th Meeting of CGPB Committee V to formulate action plan for this switch over which had recommended to have a relook on the provisions of ISP to incorporate 17-fold GCV-based classification system (G1 to G17) in place of the existing 7-fold UHV-based classification system and emphasized on the need of conversion of National Inventory for coal from a UHV-based one to a GCV-based one. Accordingly, a new committee was constituted for modification of the ISP for Coal. The recommendation of the committee was finally accepted and circulated in 2017. Subsequently,

the ISP was again modified in 2022, after incorporating the provisions of seismic technology in coal exploration.

Geological Survey of India, entrusted with the responsibility of updating the **National inventory for coal**, brought out the coal resource inventory of the country in **1976, 1978, 1984, 1986** and annually from **1988** onwards. Since 1988, the inventory had been updated calendar year-wise by compilation of sub-surface data accrued from regional as well as detailed exploration carried out by all coal exploration agencies. The inventory is being updated **financial year-wise since 01-04-2007**.

Geological Survey of India, being the premier organisation in the field of exploration for solid fossil fuel, has also been entrusted with the task of annual updating of **National Inventory of lignite since 2005**. Indian Lignite resource scenario is gradually being brightened through concerted systematic exploration by the national and state agencies which are evident from the augmentation of more than six billion tonne resource during the last decade.

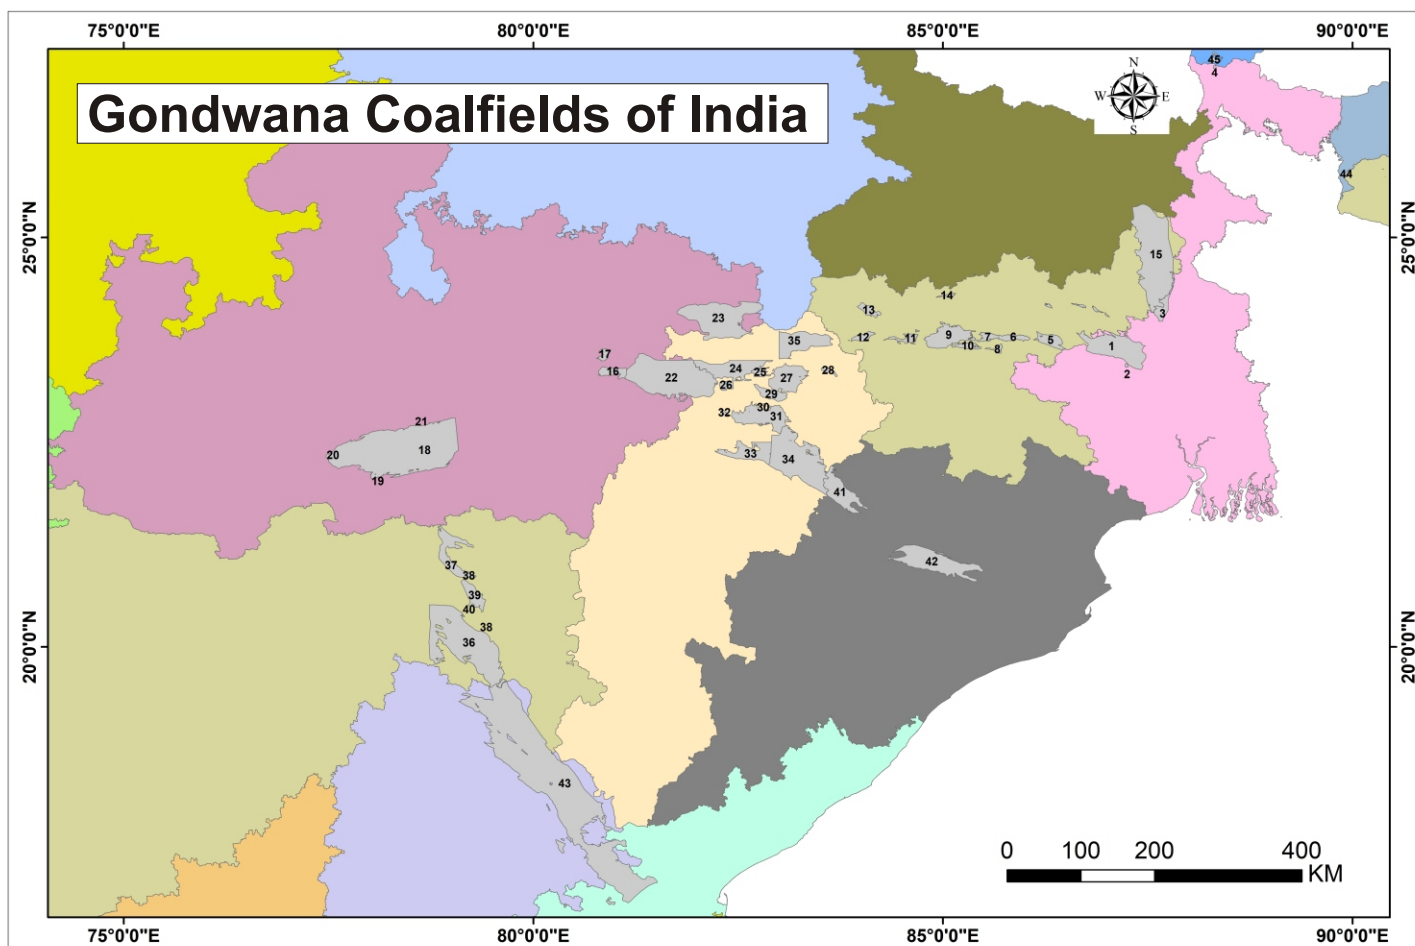

Continuous exploration efforts in different coal and lignite fields have resulted in substantial augmentation of the geological resources of coal and lignite. The resource figures although appear to be impressive prima-facie, critical analyses of the present status in the long-term perspective, leaves little scope for complacency. At present total updated geological coal and lignite resources of the country stand at 401 billion tonne and 47 billion tonne respectively. An amount of 11294.11 million tonne of coal resource has been augmented in the year 2024-25. A cursory look into the resource table reveals that a large amount of resource, to the tune of 149 billion tonne and 31 billion tonne, is still lying under 'Indicated' and 'Inferred' categories respectively which need to be upgraded into higher confidence level. Particular attention should be given for upgradation of nearly 56 billion tonne of 'Indicated' resource, which occurs within 300m depth.

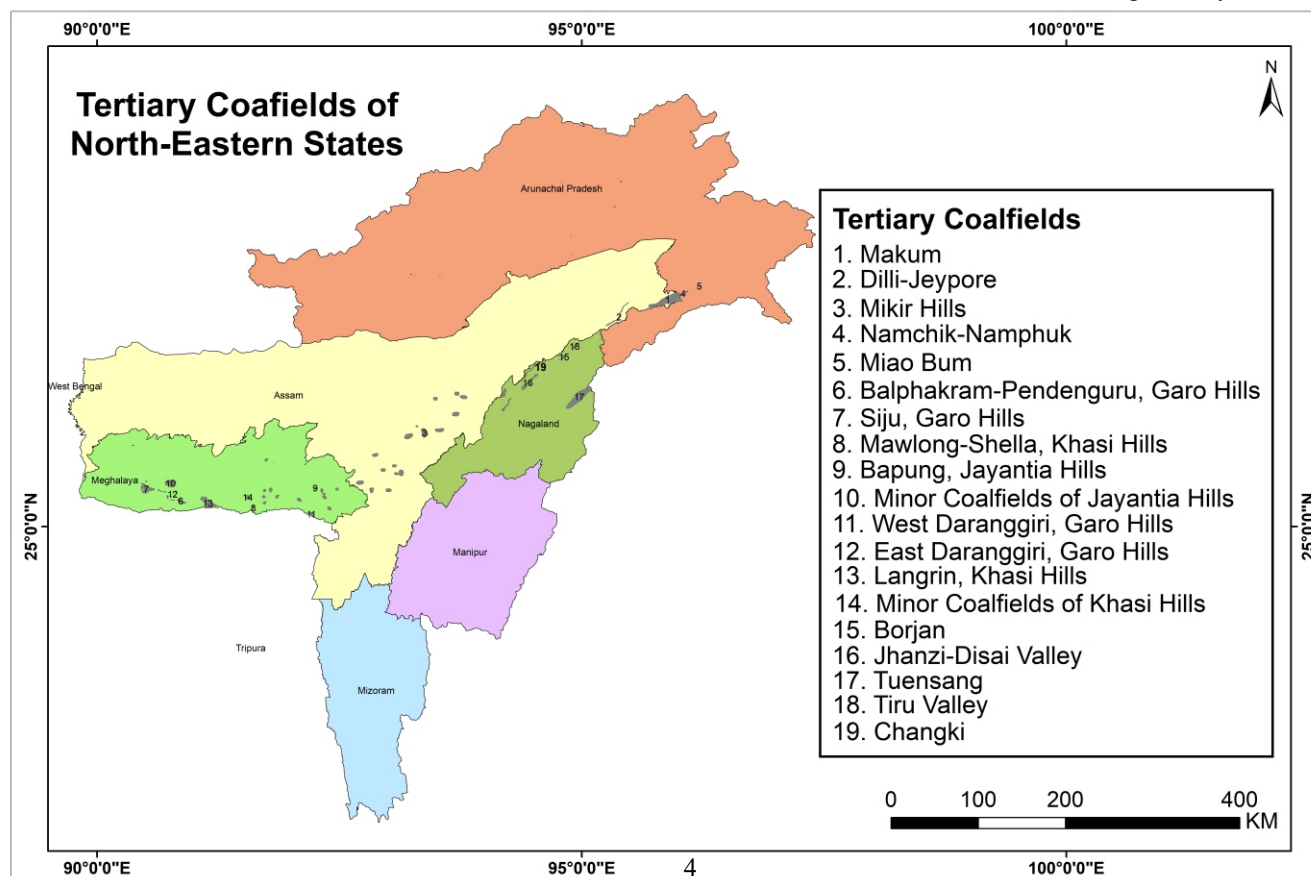

(Asit Saha)
Director General
Geological Survey of India

INDIAN COAL RESOURCES AS ON 01.04.2025

INDIAN COAL RESOURCE AS ON 01.04.2025

Introduction

Indian coal resource scenario is changing at an exhilarating pace through systematic exploration and exploitation by several agencies. Geological Survey of India is carrying out the task of updating the National Inventory for coal since 1972 following the norms of Indian Standard Procedure (ISP) for coal resource estimation, which was formulated in 1957 and modified later from time to time.

As per the recommendation of the CGPB Committee-V during the 11th Meeting held on 25.08.2015, UNFC-compliant terms and codes have been introduced in the coal and lignite inventory since 2016 (compiled for the period 01.04.2015 to 31.03.2016). Categorisation of Indian coal resources, based on degree of reliability following UNFC terms and codes, is being introduced as per the following table:

Earlier Nomenclature	Present Nomenclature	
Term	Term	Code
Proved Resource	Measured Resource	331
Indicated Resource	Indicated Resource	332
Inferred Resource	Inferred Resource	333
Prognosticated Resource*	Reconnaissance Resource*	334
* Not included in National Inventory		

The present updated geological coal resource of the country is **4,00,715.45** million tonne as on 01.04.2025 for coal seams of 0.90 m and above in thickness and up to 1200m depth from surface (Table-I). The major share of **3,99,020.80** million tonne is from the Gondwana coalfields and the rest **1,694.65** million tonne comes from Tertiary coalfields. ***This is worth mentioning that this inventory dealt with only the net geological resources assessed, so far, and did not take into account the mined out quantity.*** A total augmentation of **11,294.11** million tonne of resource over that on 01-04-2024 is the outcome of augmentation of **9896.99** million tonne by CMPDI, **1314.02** million tonne by GSI, **83.10** million tonne by SCCL. The details of state-wise, coalfield-wise, depth-wise and type-wise categorized resources are presented in the accompanying tables and diagrams.

Category-wise resource

Categorisation of coal resource into 'Measured'(331), 'Indicated'(332) and 'Inferred'(333) is based on the degree of confidence level of exploratory data. The updated 'Measured' resource of the country is **2,20,412.34** million tonne, while that of 'Indicated' and 'Inferred' categories are **1,49,048.07** million tonne and **31,255.04** million tonne respectively (Table-I) within 1200m depths. Within the 'Inferred' resource, **748.58** million tonne had been assessed during mapping in the Tertiary Coalfields of north eastern states, while the remaining **30506.46** million tonne are termed as 'Inferred (exploration)'. An augmentation of **8255.94** million tonne of 'Measured' resource is the outcome of detailed exploration carried out by CMPDIL and other organizations and it signifies that this quantum has mainly been brought into higher confidence level through detailed exploration. An augmentation of **280.80** million tonne in 'Indicated' resource and **2757.39** million tonne of 'Inferred' resource, as compared with the earlier assessed figures, is the net outcome of addition of resources assessed through regional exploration, computed against upgradation into 'Measured' resources and re-categorisation of the existing resources.

State-wise resource

State-wise distribution of Indian coal (Table-II & IVC) shows that Odisha tops the list with **100975.78** million tonne followed successively by Jharkhand (**93254.06** million tonne), Chhattisgarh (**85263.22** million tonne), West Bengal (**34386.09** million tonne), Madhya Pradesh (**33563.62** million tonne), Telangana (**23288.62** million tonne), Maharashtra (**13586.70** million tonne) and others. A glimpse at the coalfield-wise distribution of Indian coal resource suggests that five coalfields - Talcher (56.82 billion tonne), Mand-Raigarh (52.39 billion tonne), Ib-River (44.16 billion tonne), Raniganj (28.83 billion tonne), and Godavari (27.46 billion tonne) are sharing more than 50% of total resources of the country.

Depth-wise resource

Indian coal resources are categorised in the depth-ranges of 0-300m, 300-600m and 600-1200m. However, in case of Jharia Coalfield, the resources from 0-600m depth are clubbed together since the very beginning of exploration in this coalfield. The depth-wise break-up of the total resource shows that the Indian coalfields (excluding Jharia) hold **210199.82** million tonne up to 300m depth from surface and **132448.79** million tonne between 300m to 600m depth levels (Table-II). Jharia Coalfield, in addition, contains **15412.72** million tonne up to 600m depth. The total coal resource between 600m and 1200m depth levels stands at **42654.12** million tonne. At shallower level, i.e., upto 300m depth, Odisha (**56.26** billion tonne) holds maximum quantity of coal, followed closely by Chhattisgarh (**49.29** billion tonne) and then Jharkhand (**47.51** billion tonne excluding Jharia), Madhya Pradesh (**18.72** billion tonne) and others (Table-II).

Quality-wise resource

The type-wise break up of Gondwana coal reveals that coking and non-coking coal of the country are **37,372.98** million tonne and **3,61,647.82** million tonne respectively while the Tertiary coal, which is mainly of High Sulphur type is **1,694.65** million tonne (Table-IVA).

The break-up of total coking coal resources is given in Table-IVB & VA:

Prime coking coal capable of producing coke of metallurgical specification – **5443.41** million tonne.

Medium coking coal capable of producing coke of metallurgical specification only after blending – **30,132.09** million tonne.

Semi-coking coal with weak coking properties - **1,797.48** million tonne.

Jharkhand (**33.14** billion tonne) is practically the lone contributor of coking coal with minor resources from Madhya Pradesh (**2.44** billion tonne), West Bengal (**1.34** billion tonne) and Chhattisgarh (**0.46** billion tonne). Among the coalfields of Jharkhand, Jharia (11.71 billion tonne) contributes lion's share followed by East Bokaro (8.12 billion tonne), West Bokaro (4.83 billion tonne), North Karanpura (5.02 billion tonne) and others.

Gondwana coal is characterised by dominance of non-coking coal, which is at present **361647.82** million tonne. Of these, **196302.07** million tonne belong to 'Measured' while **137156.95** million tonne and **28188.80** million tonne belong to 'Indicated' and 'Inferred' categories respectively (Table-IV). State-wise distribution of non-coking coal reveals that Odisha (**101.00** billion tonne) ranks first, followed by Chhattisgarh (**84.81** billion tonne), Jharkhand (**60.12** billion tonne), West Bengal (**33.05** billion tonne), Madhya Pradesh (**31.13** billion tonne), Telangana (**23.29** billion tonne) and others.

The non coking coal resources had earlier been classified, as per ISP, into 7 grades (viz. A, B, C, D, E, F & G) based on their Useful Heat Values (UHV) for coal analysing ash+moisture values up to 55%. Following a *Gazette Notification by Ministry of Coal, Govt. of India dated 30.12.2011*, introducing a switch over from existing UHV based classification to the new Gross Calorific Value (GCV) based classification system for non-coking Indian coals, the coal exploration agencies are adopting a 17-fold GCV-based quality classification system (grades G1 to G17) considering ash+moisture values up to 65%. In accordance with the recommendation of the CGPB Committee-V during the 11th Meeting held on 25.08.2015, GCV-based quality classification system has been introduced in the non-coking coal inventory since 2016. While preparing grade-wise inventory of non-coking coal by conversion of the existing 7-fold UHV-based resource figures into 17-fold GCV-based resource figures, the Concordance Table (as published in Coal Directory of India 2012-13 by Coal Controller's Organisation, MoC) has been followed.

Old Grading based on UHV	New Grading based on GCV	GCV Range (KCal/kg)
A	G1	> 7000
	G2	6701 - 7000
	G3	6401 - 6700
B	G4	6101 - 6400
	G5	5801 - 6100
C	G6	5501 - 5800
D	G7	5201 - 5500
	G8	4901 - 5200
E	G9	4601 - 4900
	G10	4301 - 4600
F	G11	4001 - 4300
	G12	3701 - 4000
G	G13	3401 - 3700
	G14	3101 - 3400
Additional grades	G15	2801 - 3100
	G16	2501 - 2800
	G17	2201 - 2500

‘Measured’ and ‘Indicated’ categories of coal are classified into grades G1 to G17, while the ‘Inferred’ resources are ungraded. Out of graded ones, the superior quality coal (belonging to Grades G1 to G6) amounts to **40328.72** million tonne. The resource of inferior quality (Grades G7 to G17) coal is **293130.31** million tonne (Table-IVB).

The details of the grade-wise resources of non-coking coal from the different coalfields of our country have been presented in Table-III. Depth and category wise summarised resources of coking and non-coking coal are given in Table-V.

Category-wise augmentation

Break-up of category-wise augmentation of coal resources as on 01.04.2025 over that of 01.04.2024 is given in the following table.

(Resource in million tonne)

Category	Categorised resource as on 01.04.2024	During 01.04.2024 to 31.03.2025				Categorised resource as on 01.04.2025
		Upgraded from Indicated to Measured	Upgraded from Inferred to Measured /Indicated	Category-wise new Addition	Category-wise net Augmentation	
	A	B	C	D	E (B+C+D)	F (A+E)
Measured(331)	212207.16	4312.09	121.35	3822.50	8255.94	220463.10
Indicated (332)	148716.53	(-)4312.09		4592.89	280.80	148997.33
Inferred (333)	28497.65		(-) 121.35	2878.72	2757.37	31255.02
Total	389421.34				11294.11	400715.45

Ø The inventory is based on data available from Geological Survey of India, Central Mine Planning and Design Institute & Singareni Collieries Company Limited.

Ø This inventory dealt with net geological resources assessed, so far, and did not take into account the mined out reserve.

Ø Total coal extracted from the coalfields of India during 2024-25 is 1047.52 million tonne (66.47 million tonne

Coking coal and 981.05 million tonne noncoking coal) and the cumulative coal production since 1950 upto

2024-25 is 21014.67 million tonne. (source: Coal Controller, Ministry of Coal, Govt. of India).

COALFIELD-WISE DISTRIBUTION OF NON-COKING COAL (As on 01-04-2025)

**INDIAN
LIGNITE
RESOURCES
AS ON
01.04.2025**

INDIAN LIGNITE RESOURCE AS ON 01.04.2025

The inventory for lignite resource, for the year 2024-25, was prepared after compilation and collation of updated information received from different lignite exploration agencies like NLC India Ltd., Geological Survey of India (GSI) and Mineral Exploration Corporation Limited (MECL) and finalised through close interaction between GSI and NLC.

The total geological resource of lignite of the country stands at **47370.54** million tonne as on **01.04.2025**. Of these, **7964.43** million tonne belongs to 'Measured (331)', **25306.32** million tonne 'Indicated (332)' and **14099.79** million tonne belongs to 'Inferred (333)' categories. An augmentation of **74.92** million tonne of lignite from Rajasthan in indicated and inferred category contributed by NLCIL.

This inventory dealt with net geological resources assessed, so far, and did not take into account the mined-out reserve. Different exploiting agencies have mined out 43.32 million tonne lignite during the year 2024-25. Total lignite extracted so far, from the different lignite fields of India, is around 1246.55 million tonne.

The database reflects the state-wise, block/area-wise, and depth-wise categorised resources. State-wise distribution of Indian lignite shows that major part of the resources are located in Tamil Nadu (37523.65 million tonne) followed by Rajasthan (6,661.17 million tonne), Gujarat (2,722.05 million tonne), Pondicherry (416.61 million tonne), J&K (27.55 million tonne), Kerala (9.65 million tonne) Odisha (5.93 million tonne) and West Bengal (3.93 million tonne).

Nearly 55% of the total lignite resource of the country is restricted in the Mannargudi lignite field (24.69 billion tonne) of Tamil Nadu of which 19.91 billion tonne belongs to Indicated (332) category and the rest 4.78 billion tonne to Inferred (333) category. In Mannargudi lignite field most of the resources (18.08 billion tonne) occur below 300m depth.

Out of the total 7.96 billion tonne of country's Measured (331) resource of lignite, Tamil Nadu lignite fields account for 5.48 billion tonne while lignite fields of Rajasthan and Gujarat contribute 1.20 billion tonne and 1.28 billion tonne respectively.

Considering the available depth-wise break-up of total resources, about 5.89 billion tonne of resource of Tamil Nadu lignite fields occur within 150m depth. Bulk of the lignite resource of Rajasthan (3.44 billion tonne), Gujarat (0.94 billion tonne) and Pondicherry (0.42 billion tonne) is found to occur within 150m depths. Thus, a total of about 8.99 billion tonne of country's lignite resources are confined within 150m depth from the surface.

Bahur area of Neyveli lignite field falls partly in Tamil Nadu and partly in Pondicherry. The resource has been estimated separately for these two states.

Apart from resources of lignite as documented in the inventory, substantial lignite resources, as identified in course of oil exploration, carried out by ONGC and M/s Shell Oil Company have been prognosticated in the different lignite basins of India, a few of which, as available, are indicated in the footnote of the inventory table.

(This inventory dealt with gross geological resources assessed, so far, and did not take into account the mined out reserve. The resource of lignite is based on compilation of data available from

NLC India Ltd.)

2. About 60 b.t of lignite may likely to be contained within 800-1400m depth in Kalol basin (Mehsana area), Gujarat (Source: ONGC).

3. Exploration by Shell Oil Company in the Barmer & Sanchor basins of Rajasthan indicated the presence of lignite resource at deeper level.

4. Substantial resource of lignite has also been prognosticated in the Cambay basin of Gujarat at deeper level (Source: ONGC).

5. A few more minor lignite deposits were also reported from isolated areas of Kerala, West Bengal and J & K states and lignitic clay from Tripura.

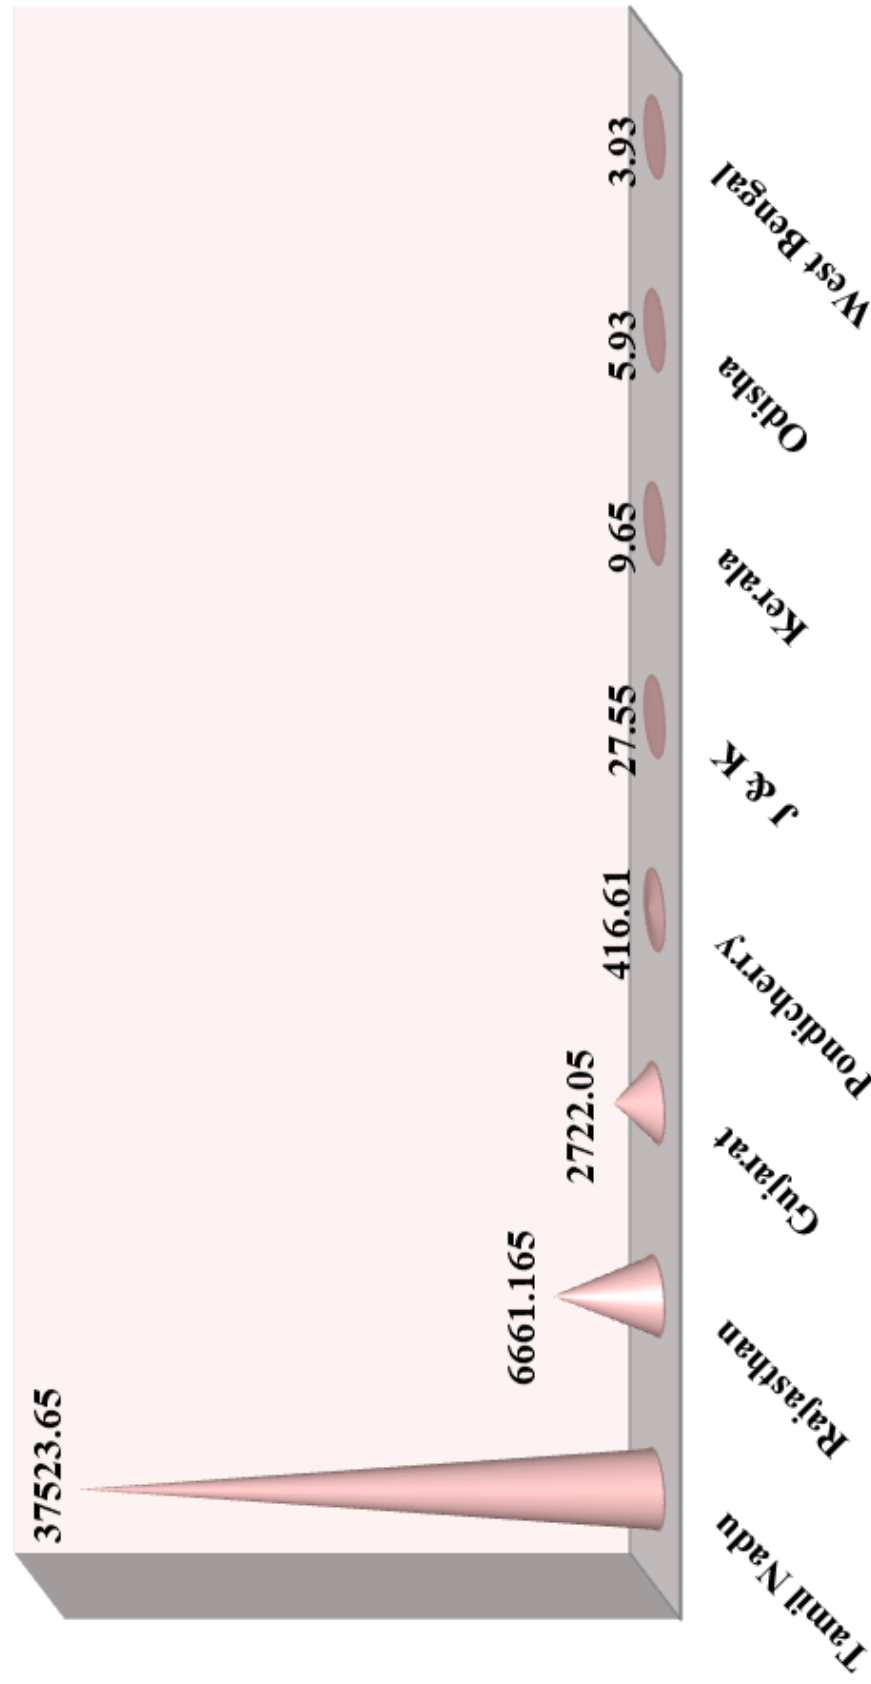

6. 104.13 mt of Reconnaissance (334) Resource is assessed in Charanwala North area of Palana Basin, Jaisalmer and Bikaner districts, Rajasthan
